412 hole goes the narrow end of the ax.
[177] This is essentially a Neolithic type of
[439] hafting.

Perhaps the Negro will give him
[313] only the ax head, without a haft. In this case the pygmy will cut down a thin sapling, or a tree branch, just the right thickness, and use it bark and
[284] all. He splits this with his knife, at one end. Then he wraps the split and the blade which he has thrust through it with twine or rattan. The pygmy will use the Negro-hafted ax on the ground, but if he is climbing a tree and needs an ax while up there, he will take along one of his own hafting by preference, because it is lighter.

Both men and women use these axes. The women also have knives of their own, of the same manufacture. These knives are about six inches long, leaf-bladed, double edged. The handle is simply a thick tang, twisted, and thus is all one piece with the blade. In some cases, however, small wooden handles are added. The women use these for
[462] many purposes—for peeling bananas, and preparing other foods for cooking; to cut monocotyledonous leaves for roofing, and to split the stem. In general, it is the all-purpose woman's tool.

412 The man's knife is larger and single
177 edged, a kind of small machete, made
439 in Germany. The Negroes obtain them from white men by trade and give them to the pygmies. I once tried giving them American machetes, of the kind prized in Central America, but they were too large and too heavy.
412 The men use these machetes for cutting
[313] lianas, tree limbs, and so forth. For
• [322] small woodwork, however, such as whittling an arrow shaft, they are more likely to use an arrowhead or spearhead, which is nearer the right size.

Axes and the two kinds of knives and arrowheads and spearheads are the only cutting tools the pygmies have or know how to use.
